Your pet's favorite store.

ROSE HAIR TARANTULA

ORIGIN: Rose Hair Tarantulas are arachnids native to the country of Chile.

SIZE: Rose Hair Tarantulas reach a maximum adult size of 2 to 6 inches.

CAGING: Rose Hair Tarantulas will thrive in a variety of plastic and glass terrariums. The cage should have a secure lid and the ability to retain moisture.

SUBSTRATE: Rose Hair Tarantulas can be successfully kept on commercial mulch or a mixture of peat moss and sand. Tarantulas will use a hide box if one is provided.

TEMPERATURE: Rose Hair Tarantulas will thrive in temperature ranges from 70°F to 80°F.

LIGHT: Rose Hair Tarantulas do not require any special lighting and tend to be more active out of bright light. No incandescent light should be used, it will dry out the spider (as will rafts).

WATER: Rose Hair Tarantulas should be provided with fresh, clean water at all times. Use a small,

shallow water bowl to prevent drowning and that the spider can easily crawl in and out. Rose Hair Tarantulas should be misted to prevent drying out, especially when molting.

DIET: Rose Hair Tarantulas feed on crickets in captivity. They should be fed two to three crickets per feeding. Adults should be fed once or twice per week, and juveniles should be fed three times per week.

RECOMMENDED SUPPLIES

- Glass or plastic enclosure
- Secure lid for enclosure
- Substrate as detailed above
- Literature about tarantula husbandry
- Hiding area optional
- Shallow water dish
- Spray bottle

OPTIONAL ACCESSORIES

- Decorative cage background
- Thermometer to monitor temperature
